About me

An ambitious and highlylogical programmer, I possess an innate ability to learn quickly and adapt to diverse fields. I dedicate my passion to programming and developing artificial intelligence applications that offer solutions and services capable of making a positive impact and changing lives. I believe that life is a continuous learning process, and I always strive to achieve my professional goals with a determined approach that doesn't acknowledge obstacles

Skills

1. **programming**
- Python (Expert-level backend development and logic implementation)

2. **Backend & Concurrency**
- **FastAPI** specialized in architecting high-performance asynchronous environments to maximize server-side efficiency.

3. **AI Architecture & Data Integrity**
- Engineered AI Agent sequences utilizing Google **ADK/SDK**. Expert implementation of **Pydantic** and **Enum**-based validation to ensure the reliability, predictability, and stability of AI-generated outputs.

4. **Database Management**
- Advanced use of **SQLAlchemy** ORM for seamless interaction with **SQLite** and **PostgreSQL** databases

Professional Experience & AI Portfolio

Child's Nest | Lead Full-Stack Developer

AI-Driven Behavioral Modification Platform

- Architected a sophisticated sequential system of AI Agents using Google **ADK** and **SDK** to automate the generation of personalized narrative content tailored to individual child preferences (environment, characters, themes)
- Engineered real-time interaction loops utilizing **FastAPI** and **WebSockets**, creating "Gemini Live" style experiences to capture user data dynamically
- **Strategic Impact**: Designed interaction flows specifically to address psychological vulnerabilities and modify child behavior, demonstrating the ability to translate complex AI agent orchestration into meaningful human-centric outcomes.

Technical Leadership & Knowledge Transfer | Python Instructor

Technical Leadership & Knowledge Transfer | Python Instructor

Mentorship and Backend Logic Training

- Orchestrated intensive technical training programs, facilitating the knowledge transfer of Python fundamentals, data structures, and complex functional programming to diverse learners
- Cultivated logical problem-solving frameworks in students, emphasizing the transition from syntax mastery to the architecting of robust backend solutions
- **Strategic Impact**: Demonstrated the ability to communicate complex backend logic and architectural principles, a critical skill for leading technical teams and ensuring code quality across development cycles.

AI Governance & Professional Competencies

- **AI Governance & Prompt Engineering:** Expert-level control of Large Language Models (LLMs) including **Gemini** and **Claude** Specialized in architecting "Constitutions" (strict behavioral frameworks that govern model outputs) to ensure they remain immune to hallucinations and strictly aligned with ethical and functional requirements
- **Strategic Logical Reasoning**: High-capacity for identifying optimal logical paths and architectural patterns to meet aggressive project goals
- **Innovation & Visionary Execution**: Entrepreneurial mindset focused on disrupting routine processes through AI automation and the development of projects with high societal value

Languages | Tools | Projects

Languages

- **Arabic** (native)
- **English** Limited Working Proficiency (B1) – Solid technical reading and writing

Development Tools

- VS Code
- Github
- Codeberg
- Claude - Gemini

Projects

- **FastAPI Base Foundation:**

This project is currently being developed to become the foundation and basic basis from which I start in projects that need **FastAPI** to avoid code duplication. Currently, on a daily basis, I am developing the code on (**Authentication** - **Authorization** - **Audit** - etc.) level to make .the project robust and usable
